KELLY-MOORE™ PAINTS

HIGH DENSITY PAINTER’S PLASTIC

Our new Kelly-Moore
High Density Painter’s Plastic
features:

- Paint flake resistant - dried paint sticks for quick and easy clean-up
- Better adhesion for painter’s tape
- Superior cling & fold pattern
- 100% guaranteed quality and durability
- Non-slip film
- Bilingual packaging
- Easy to unfold and install
- For Professional and DIY use
- Easy-to-use dispensing box

How to Install:

When dispensing the plastic, notice the arrow that points toward the edge. The edge overlaps the fold in the plastic, making it quick to find the top edge (the unfolded plastic has enough cling to hold it to the wall prior to separating/unfolding).

Line the unfolded plastic around the room to be masked. "This Side Out" should be visible on the plastic and facing out. This side is treated, and acts like a vacuum to hold paint and dust - the opposite side of the plastic (against the wall) has the cling property.

Once the plastic is cut to the proper length, slide the edge of the plastic to where it will be taped. Either tape the top edge of the plastic prior to separating, or simply hold the top edge of the plastic with one hand and pull down/separate the plastic with the other hand. The plastic can be adjusted after the film is separated before taping.

At Select Participating Stores. May require special order. See Store Manager for Details.
